July 6, 2011

Hello, I am Ignas Anikevicius and I am currently working under Dr. Scherman to produce a website that would serve all members of the department from Part II students to group leaders containing all things that are Chemistry and L<sup>A</sup>T<sub>E</sub>X related.

I was wondering if you could answer some questions for me, which would significantly benefit the quality and the content of the website.

## The preliminary list of the content includes:

- notes, links, templates, instructions and downloadable .sty and .cls files to produce a Cambridge Department of Chemistry PhD thesis, CPGS report and part III project report (NB here I would really like to get input and hopefully have several examples which can be used for interested students)
- notes, links, templates, instructions and downloadable .sty and .cls files to produce manuscripts for several scientific journals (ACS, NPG, Willey-VHC and possibly others)
- notes, links, templates on how to produce a CV in LaTeX
- notes, links on how to properly set up a computer to start using LaTeX
- any other requests or ideas?

## The questions:

1. For what purpose do you usually use L<sup>A</sup>T<sub>E</sub>X?
2. Do you see any real drawbacks in using L<sup>A</sup>T<sub>E</sub>X for your all word-processing needs?
3. In addition to the mentioned content of the website, what else would you like to see there?
4. Could you give names of scientific journals to which you have submitted papers using L<sup>A</sup>T<sub>E</sub>X? For which journals you had to use a different typesetting system (such as Word or Open Office)?
5. Could you share any .tex, .cls and .sty files which you had write on your own? This would serve as a great example for templates and website making in general.
6. Would you like to use L<sup>A</sup>T<sub>E</sub>X for typing documents in other languages than English?
7. Would you like to add anything?
